

RE PROJECT ACQUISITION

Some projects take time to realize cash flows and therefore are not appealing to the average developer. Our team is actively acquiring these developments and carrying them through the construction process.

CL&I Renewables is dedicated to the acquisition of utility projects in the renewable energy sector. We are actively seeking “shovel ready” projects that meet our investment criteria.

Project Requirements:

- Mature projects
- Photovoltaic Solar, Thermal Solar, Wind and Biomass Energy Projects
- Minimum of 1.5MW Projects (lower on a case by case basis)
- Must have an off take or Power Purchase Agreement in place with a credit worthy entity
- Land or project site must be under control
- Permitting must be in place
- Interconnection Agreement in place or an LOI confirming that it is close to being in place
